

ESD Safe, PC Datalogging & Alarm available, 1~10%, 1~50% & 20~60%RH ranges

Humidity range conforms to IPC/JEDEC J-STD 033C Standards for storing even expensive IC packages

Wrist Strap Terminals for ESD Safe working Grounding Line is also provided at back side of Dry Cabinet to properly ground the same.

LED Display for temperature and humidity

Input Supply: 220V ~ 240V, 50Hz

· Humidity Controller maintains stable constant humidity

The error of humidity value is ±3%RH (It is not ±3%)*

* Assume the set point of humidity is 10%RH. Then the actual value will be within 7%RH and 13%RH. If set point is 18%RH then actual value will be within 15%RH and 21%RH.

4 Heavy Duty Castor Wheels (2 Wheels lockable)

Features:

- · Made from Cold Roll Steel with black paint ESD Coating
- Tampered Toughened Glass Windows
- ESD Safe Castors Wheels

Optional LED Display for Alarm

Specifications:

INFCDE-100E Internal Dimensions

Why to use ESD Safe & Ultra Low Humidity Dry Storage Cabinets?

The on-going ultra miniaturization in electronics field, is resulting into expensive large size ICs which are not only static charge sensitive but are also moisture sensitive. Such devices needs higher level of moisture control as otherwise they will have internal damage during the reflow process because of moisture expansion. Major failure reason is the rapid heating of the moisture absorbed within the plastic encapsulant of such ICs. The prevention lies in storing in such ICs in ESD Safe and Ultra Low Humidity Dry Storage Cabinets.

Cold Roll Steel Dry Humidity Storage Cabinets with Datalogger

ESD Safe, PC Datalogging & Alarm available, 1~10%, 1~50% & 20~60%RH ranges

Optional Door Alarm Module and Data Logging Accessories

Optional Door Alarm Module

This Module can be installed on top of the Humidity Cabinet to monitor the humidity inside the cabinet and to alert the user for any change in humidity value.

This Module is programmable for upper and lower limit of humidity. Once the humidity inside the cabinet increases or decreases from this programmed limit, the alarm will start with beep sound.

Example: The set value in the cabinet is 30% RH. The Alarm Module is programmed for +/- 5%RH. Then if the value of humidity inside the cabinet increases beyond 35%RH then the alarm start ringing. Accordingly if the humidity inside the cabinet decreases beyond 25%RH then the alarm start ringing.

If the door is opened for long time, the humidity value increases from the set upper limit - the alarm start ringing

Optional Data Logger with PC Interface & Software

The humidity and temperature inside the cabinet is monitored on a computer using this optionally available Data-logger.

For this Datalogging the hardware is fitted on the Dry Cabinet. This hardware allows the Dry Cabinet to be connected to a PC thru a connecting cable (RS232 to USB).

The software provided allows the capturing and saving the data on a computer.

Capturing time intervals is programmable. It can be programmed for 1 second, 1, 2, 3, 4, & 5 minutes.

The data is displayed on the monitor in tabular form as well as in graphical form. This data is captured and automatically saved in the computer. This data can be viewed in excel sheets for further analysis.
